

How can I construct a map where by clicking on a pin selected information is displayed in Google Earth?

All information displayed behind a pin is contained in a field named DESCRIPTION.
Information contained in “description” can be tagged with HTML tags for special effects:

 to mark the beginning and end of information to be displayed in **bold**

<i> </i> to mark the beginning and end of information to be displayed in *italics*

 insert a hard return at point of insertion

You have 2 different options for constructing the field “description”, in

1. SQL/EQL form.
2. Excel (to be imported in PC-ACE backends as a usertable)

Case 1: SQL Query

Suppose that you have a usertable with the following fields:

You want to construct a DESCRIPTION field containing the Victim, Race, Sex, Reason, Date, and City. You also want to display the Victim in bold and have a carriage return after every field.

The following SQL query will achieve what you want:

```
SELECT DISTINCT [Latitude], [Longitude], "<b>Victim: " & [Name] & "</b>" & "<br/>" &
"Race: " & [Race] & "<br/>" & "Sex: " & [Sex] & "<br/>" & "Reason: " & [Reason] & "<br/>"
& "Date: " & [Date] as [Description], [Date]

FROM [sql_f2];
```

PC-ACE v.828

File Home Create External Data Database Tools Acrobat

Perform an SQL or EQL query (query results "sql_f2" available for analysis)

```
SELECT DISTINCT [Latitude], [Longitude], "<b>Victim: " & [Name] & "</b>" & "<br/>" & "Race: " & [Race] & "<br/>" & "Sex: " & [Sex] & "<br/>" & "Reason: " & [Reason] & "<br/>" & "Date: " & [Date] as [Description], [Date]
```

FROM [sql_f2]:

View SQL query results (query name: sql_f0) - 4 fields displayed

Within Excel, you want to construct a new column DESCRIPTION containing the Victim, Race, Sex, Reason, Date, and City. You also want to display the Victim in bold and have a carriage return after every field.

Construct the first Description field in the following way:

```
= "<b>Victim: " & E2 & "</b>" & "<br/>" & "Race: " & F2 & "<br/>" & "Sex: " & G2 & "<br/>" & "Reason: " & H2 & "<br/>" & "Date: " & TEXT(I2,"mm/dd/yyyy")
```

Save the Excel file and import it into PC-ACE.

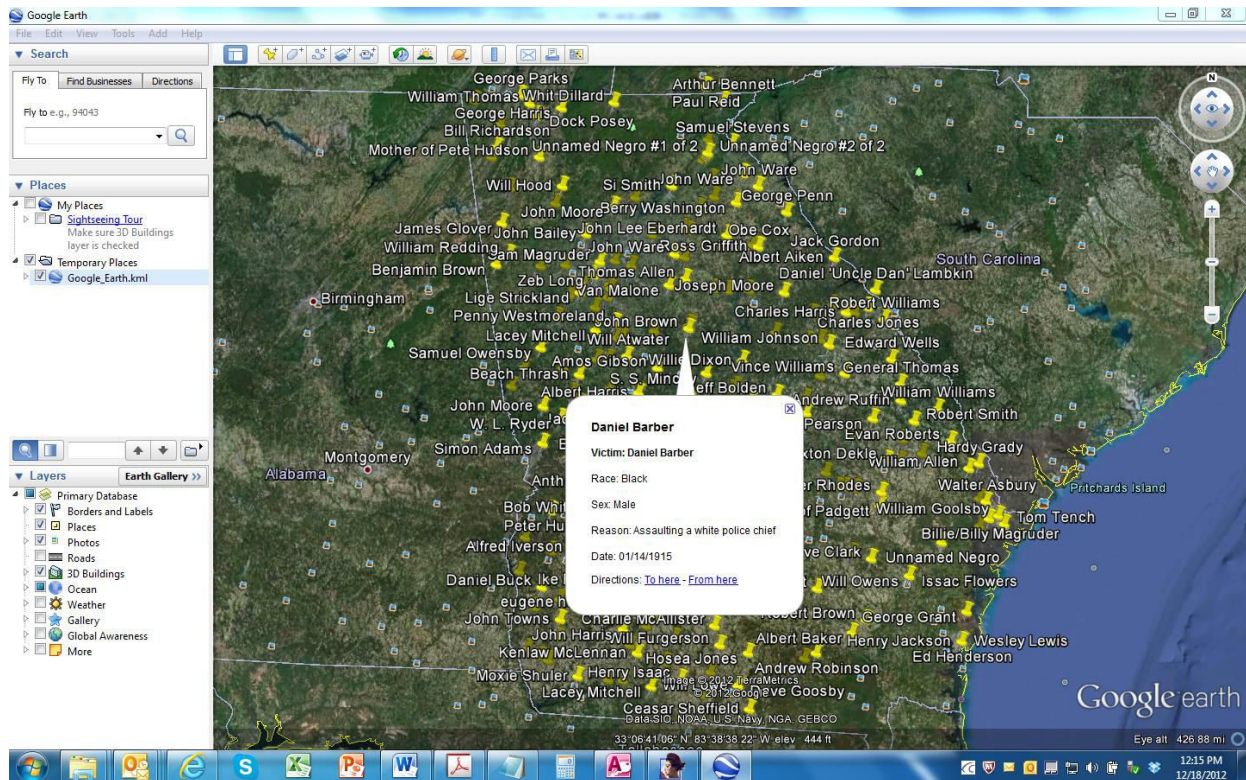

The screenshot displays the PC-ACE v828 software interface. On the left, the 'All Access Objects' pane lists various functions and data analysis tools. The main window shows a SQL query editor with the following query:

```
SELECT DISTINCT [City], [Latitude], [Longitude], [Description], [Name], [Race], [Sex], [Reason], [Date], [Time]
FROM [usertable:Lynchings GIS with DESCRIPTION field]
ORDER BY [City], [Latitude], [Longitude], [Description], [Name], [Race], [Sex], [Reason], [Date], [Time] DESC;
```

Below the query editor, a 'View SQL query results (query name: sql_00) - 10 fields displayed' window shows a table of results. The table has 10 columns: City, Latitude, Longitude, Description, Name, Race, Sex, Reason, Date, and Time. The data is sorted by City, then Latitude, Longitude, Description, Name, Race, Sex, Reason, Date, and Time in descending order.

City	Latitude	Longitude	Description	Name	Race	Sex	Reason	Date	Time
