Java JDK

Stanford CoreNLP and many other NLP routines are written in Java. You will need to download and install the Java Standard Edition (SE) **Development Kit** from the Oracle Java website:

<https://www.oracle.com/java/technologies/javase-downloads.html#JDK14>

Currently, CoreNLP requires a Java release at least 8 or above. Make sure to download a Java JDK version appropriate for your machine (Windows, Mac, Linux).

You will be required to create a **free account.**

Windows OS: Download Java JDK

You can download Java JDK 8 or above at

<https://www.oracle.com/java/technologies/javase-downloads.html#JDK14>

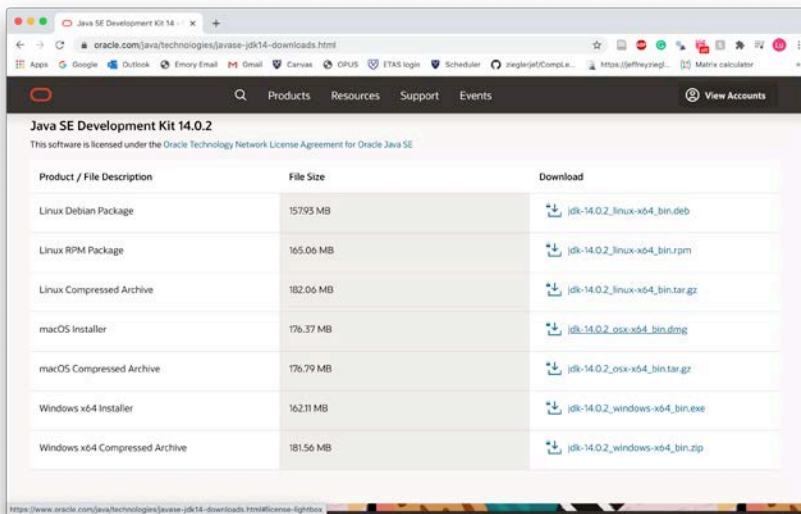

Windows OS: Install Java JDK

The Java downloaded file is an executable file (.exe extension). Click on the file name

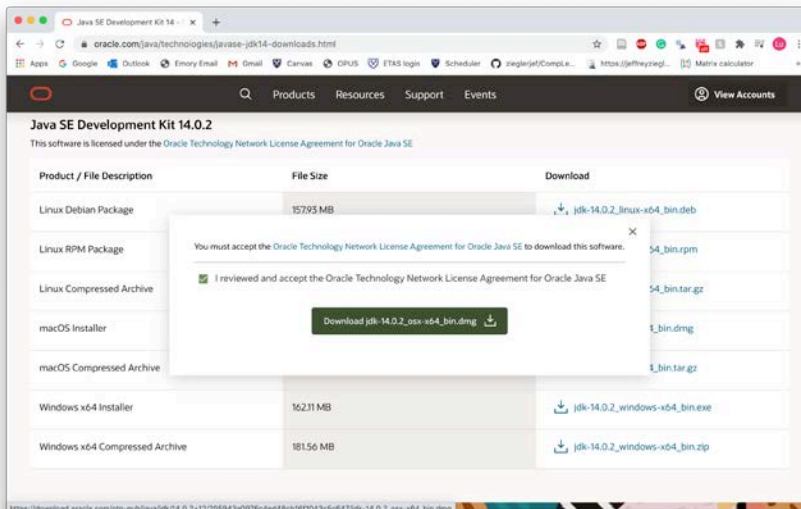

The executable file will do everything else, installing the software.

Mac OS: Download Java JDK

Click macOS Installer, you will get

Mac OS: Install Java JDK

Once you've downloaded the file, it should be in your Downloads.

Double click on the file, you will get

and double click on the pkg as well.

You should get this installer and please follow the instructions. If the installation is successful, you should get the following prompt
